Allowable Subject Matter

Claims 7-8 are allowed.

The following is an examiner's statement of reasons for allowance:

Claim 7 is allowable because the art of record, considered alone or in combination, neither anticipates nor renders obvious an overload safety device comprising: a driving device with a drive shaft, a connecting rod operatively connected the drive shaft with a slide, wherein the connecting rod has a pressure element disposed displaceably in a longitudinal direction of the connecting rod to act upon a fluid, and wherein the pressure element comprises two half shells and substantially completely surrounds the drive shaft, in combination with the rest of the claimed limitations.

Newly cited US 4,030,336 discloses an overload protection device having a pressure element (3) disposed displaceably in a longitudinal direction of a connecting housing (1), but this reference does not teach the pressure element completely surrounds a drive shaft.

None of the cited references, by themselves, or in combination with the other prior art, teach a connecting rod having a pressure element in a structural arrangement as claimed in claim 7 in order to prevent overloading in a press.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Application/Control Number: 10/603,594 Page 3
